

API – Arrests and Citations by Victim

The data we used for the 2016 numbers is from our Unusual Occurrence Report (UOR) database, and provides information on if APD was called and a case was filed (I expect this is the same as the citation for assault events. This would explain the drastic increase in citations for pt. to pt. assaults between 2015 and 2016.) This data also delineates whether an APD case was filed and the patient was arrested and removed from the hospital.

Information provided by Gavin H. Carmichael, Interim Chief Executive Officer, Alaska Psychiatric Institute
