

Data Update – Trustee Conversations

What is Trust Data?

A summary of a series of 1:1 conversations with Trustees to gain a better understanding of:

- What is meant by *data*?
- What type of *data* is needed for the Trust?

General Observations

- Similar, but unique positions on what data means for the Trust and where efforts should be focused.
- Data should demonstrate:
 - Need, demand, utilization
 - Outcomes of services or grants/initiatives
 - Inform systems change, policy and funding decision-making.
- Uncertainty of whether staff are collecting the right data or aren't presenting it effectively
- More outcomes data should be presented

Matrix of Trust Data Needs

Trust Data Needs				
Source	Data Type	Data Domains		
		Outcomes	Needs/Demand	Service Access
Internal/ External	Outcomes/Evaluation	X		
External	Prevalence		X	
External	Demand/Need		X	
External	Utilization		X	X

Next Steps – *Internal Focus, Grants*

- Reviewing grants program, agreements, database/platform for process improvements
- Continue to explore “additional” funding for grantees to do data/evaluation
- Increase grant outcomes data presentation frequency
- Increase external data presentation frequency

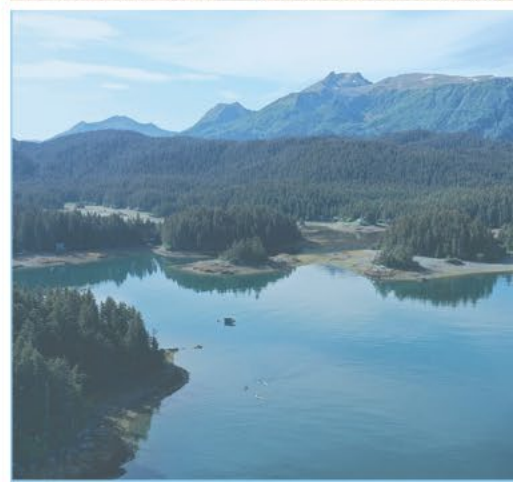

Increasing Data Presentations

Example: Data Sharing Schedule at Program & Planning Committee				
	January/February	April	July	October
Outcomes/Evaluation	X	X	X	X
Prevalence	X			
Demand/Need		X		
Utilization			X	
Other Data TBA	X	X	X	X

Next Steps – *Capacity Building for Data*

- Internal Capacity Building
 - Contracts, Grants, Partnerships
 - Developing internal capacity/infrastructure
- External Capacity Building
 - Contracts, Grants, Partnerships
 - Supporting external data Analytics (AJiC, CAAS, ISER etc.)
 - Paying for data positions within partner organizations (DOH, DFCS, DOC, ACS etc.)

Thank You!
